reflux, uni or bilateral pelvi-ureteral junction obstruction, multicystic renal dysplasia, renal agenesis, renal aplasia, hydronephrosis, von Mayer-Rokitansky-Kuester disorder and bifid ureter.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This represents the nucleotide sequence of the breakpoint region on der(19) which reveals that the transcriptional orientation of the hydronephrosis (HKG) gene on the short arm of chromosome 6 is from the telomere to the centromere. A translocation partner to this gene on chromosome 6 is the chromosome 19 USF2 gene. The HNG gene can be used as a starting point to design suitable compounds or techniques for the treatment of renal diseases or disorders, or nucleotide probes for diagnosing cells involved in renal diseases or disorders. A protein or preparing suitable antibodies for diagnosing cells involved in renal diseases and disorders. The products and method can be used to treat or diagnoses ernal diseases and disorders and method can be used to treat or diagnose renal diseases and disorders evaluation or the contraction of the contrac

The protein encoded by this sequence contains the T-E-Y sequence, in which the threonine and tyrosine residues are phosphorylated to activate the protein at residues 249-231. The MAP kinase and its gene can be used to regulate the synthesis of jasmone acid and the synthesis of a group of infectious synthesis of jasmone acid and the MAP kinase gene into a plant, thereby inducing expression of the MRNA kinase (or its antisense proteins can be regulated in the plant.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Virulence; P7C18; vaccine; antibacterial; antibiotic; screening; phosphoribosylformylglycinamide decarboxylase; PurL; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ó
                                                                                                                                                                                                                                                                                                                                                                                                                    This is the nucleotide sequence of a virulence gene identified in Staphylococcus aureus mutant P15C11. S. aureus genes (see X07088-136) associated with virulence were identified by signature-tagged mutagenesis in which mutants containing a chromosomal insertion of a signature tagged transposon were generated, mutants with attenuated virulence were identified in amouse model of bacteraemia, and the nucleotide sequences of the regions flanking the transposon insertion sites of these mutants were determined. Database sequence comparisons were performed to identify the virulence genes and to determine the possible function of their protein products (see also W97680-724). The P15C31 virulence gene product (see W97694) was identified as phosphoribosylformylgycinamide decarboxylasse Purt., an enzyme involved in purine biosynthesis. A claimed method of identifying an antibacterial agent involves assaying potential agents for the ablility to interfere with the expression of S. aureus containing a neutional mutation in one of the virulence genes, and its use in

                                                                                                                                                                                                                                                                                                                                                  Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 118

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Length 3666;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 13, Application US/08682517
; Patent No. 5874267
; GENERAL INFORMATION:
: TITLE OF INVENTION: Expression of surface layer proteins
: TITLE OF INVENTION: Expression of surface layer proteins
: TITLE OF INVENTION: Expression of surface layer proteins
: TITLE OF INVENTION: 25
: COMPUTER READABLE FORM:
: COMPUTER: IBM PC compatible
: COMPUTER: IBM PC compatible
: COMPUTER: PatentIn Release #1.0, Version #1.30 (EPO)
: CURRENT APPLICATION DATA:
: APPLICATION NUMBER: US/08/682,517
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  APPLICANT:
TITLE OF INVENTION: Expression of surface layer proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Expression of surface layer proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              NUMBER OF SEQUENCES: 25

/note="Vector: paluescript II XR; Site_1: EcoRI; Site_2:
XhoI; This cDNA library was constructed from mRNA isolated
from immature flowers of field grown plants. The cDNA
library was prepared using the Stratagene pBluescript II
XR library construction kit. Complementary DNA was
synthesized from mRNA using a primer consisting of a poly
(dT) sequence with a XhoI restriction site. EcoRI adapters
were ligated to the blunt-ended cDNA fragments followed by
XhoI digestion. The cDNA fragments were directionally
cloned into the EcoRI-XhoI restriction site of the
pBluescript vector. The ligated cDNA fragments were
transformed into XLIO-Gold host cells. This library was
                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        L (bases 1 to 210)

/note="Vector: pT7T3D-Pac (Pharmacia) with a modified polylinker: Site=1: Not I; Site=2: Eco Ri; The NIH_BMAP_M_S5 library is a subtracted library of a series ultimately derived from a mixture of individually tagged normalized libraries from ten regions of the mouse brain (cerebellum, brain stems, olfactory bulbs, hypothalamus, cortex, amygadala, basal ganglia, pineal gland, striatum, hipoccampus) after a series of subtractions to reduce the representation of coNNA from which ESTS had already been generated. For a detailed description of the library from which this clone was derived, please visit our web site
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Contact: Chin, H

The sequence contained an oligo-dr track that was present in the oligoucleotide that was used to prime the synthesis of first strand cDNA and therefore this may represent a bonafide poly A tail. The sequence tag present in the cDNA between the NotI site strand cDNA and therefore this may represent he NotI site olfactory bulbs tissue cDNA Library Preparation: M.B. Soares Lab Clone distribution: Researchers may obtain BMAP cDNA clones from ReSERKH GENETICS. It should be noted that Bento Soares Lab generating a small number of additional specialized non-redundant appropriate and limited collaborative arrangements
Seq primer: M13 Forward

Anote—"Vector: pTTT3D-Pac (Pharmacia) with a modified polylinker; 1st strand cDNA was prepared from mammary polylinker; 1st strand cDNA was prepared from mammary polylinker; 1st strand cDNA was listate from a lactating femele, and was then primed with a Not I - oligo(dT) primer. Double-stranded cDNA was ligated to Eco RI adaptors (Pharmacia), digested with Not I and cloned into the Not I and Eco RI sites of the modified pT7T3 vector. Library is normalized. Library was constructed by Bento Soares and M. Fatima Bonaldo. "

/note="Organ: shoot tips: Vector: Lambda TriplEx; Site_1:
Sfi1 (A); Site_2: Sfi1 (B); Shoot tips (approx. 2 cm from
apex) were collected during the spring, frozen and used
for mRNA isolation. The SMARY-PCR method (Clontech) was
used to prepare a library from 1 ug total RNA, using the
Lambda TriplEx vector. Plasmid subclones in pTriplEx were
recovered by cre-lox excision in E. coli strain BM25.8 and

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              N_Geneseq_36:*

```

```
This sequence represents a Leptospira DNA sequence isolated from the pathogenic Leptospira (LS) bacterium of the invention. The bacterium belongs to serogroup Hurstbridge or serovar hurstbridge or the species L. fainei. The LS bacteria can be used for conferring protective immunity against pathogenic LS bacteria in humans or animals. The bacteria can also be used for prophylactic or therapeutic treatment of infections. The DNAs and antibodies may also be used for detection and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This DNA sequence comprises the maize 233 Zm41-A gene. This is an orthologue of Arabidopsis Ms41-A (see 190522), a gene that confers male fertility. It was obtained following a database search for sequences that showed homology to Ms41-A DNA, isolation of a partial cDNA clone, and use of this clone to isolate Zm41-A genes 231 (190542), Z33 (190543) and Z35 (190544) from genomic lambda inbraries. The genes show a high level of conservation. Z35 may be derived from Z31 via genetic rearrangements, deletions and/or insertions. Z33 has subsequent deletions from Z35 and is truncated, having only exons 3, 5 and 6. The Ms41-A and Zm41-A genes antisense or ribozyme sequences can be used to produce transgenic plants with controlled male fertility. Male sterile plants where restoration of fertility is not needed, e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Nucleic acid encoding proteins involved in male fertility in plants - used to control fertility and for production of hybrid seed

The invention relates to nucleic acid sequences (V84411 to V84633)
encoding human secreted proteins (W88534 to W88756). The secreted protein
encoding human secreted proteins (W88534 to W88756). The secreted protein
ce agenesca are deposated with the ATCC under deposit numbers ATCC
797919, 97974, 97975, 97976, 209007, 2090009, 2090010, 209011,
2090011, 209080, 209081, 209082, 209084, 209085, 209511. Host
cells comprising recombinant vectors containing the nucleic acid
cequences are used for the recombinant production of the secreted
cells comprising treating or ameliorating medical conditions e.g.
proteins. The polynucleotide and amino acid sequences are useful for are
useful for preventing, treating or ameliorating medical conditions e.g.
by protein or gene therapy. Pathological conditions can be also diagnosed
by determining the presence of mutations in the new polynucleotides.
Comprising the presence of mutations in the new polynucleotides.
Specific uses are described for each of the polynucleotides, based on
which tissues they are most highly expressed in, and include developing
comprising the diagnosis or treatment of cancer, neurodegenerative
disorders, developmental abnormalities and foetal deficiencies, blood
disorders, tumours, leukemias, diseases of the immune system, autoimmune
cischemic shock. Alzheimer's and cognitive disorders, schizophrenia,
crestenosis, prostate diseases, lymphomas, inflammation, allergies,
such as osteoporosis, arthritis or malignancies, diseases of testes, lung
cort thymus, dispersive/chockrine disorders, infections and AIDS. The
collypeptides are also useful for identifying their binding partners.
The present sequence represents a gene encoding a human secreted protein
contents of the present sequence represents and clone identification).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New isolated human genes and the secreted polypeptides they encode useful for diagnosis and treatment of e.g. cancers, neurological disorders, immune diseases, inflammation or blood disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                           Endress GA;

209048) which encodes a secreted human protein. The gene can be used to generate fusion proteins by linking to the gene to a human immunoglobulin Pc portion (e.g. v59501) for increasing the stability of the fused protein as compared to the human protein only.

The invention relates to 186 novel genes and their fragments (nucleic acid sequences: V95311.V59012; amino acid sequences WW7711.W75056) which are useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. Also, pathological conditions can be diagnosed by determining the amount of the new polypeptides in a sample or by determining the presence of mutations in the new polynucleotides. Specific uses are described for each of the 186 polynucleotides, based on which tissues they are most highly expressed in (see V5911 for described
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               invention, which is suitable for use in a vaccine. The Bb polypeptides can be used in vaccines for eliciting protective antibodies to members of the Borrelia genus, particularly for the use against Lyme disease in humans and animals. They can be used for preventing or attenuating an infection caused by a member of the Borrelia genus. The products can also be used for detection of members of the Borrelia genus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Antigenic protein; vaccine; Lyme disease; infection; detection; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          screening with maize Accase antiserum. Probes generated from the transcarboxylase active site domain (T17112) and the biotin binding site domain (T17112) and the biotin binding site domain (T17113) coding sequences may be used to screen plants for similar genes. An expression cassette containing the gene, a mutant or an antisense DNA sequence may be combined with a plant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The sequence encodes a maize acetyl-CoA-carboxylase (ACCase, BC-6.4.1.2) fragment. The enzyme catalyses the formation of malonyl-CoA from acetyl-CoA and bicarbonate, and requires a biotin prosthetic group for activity. The enzyme is inhibited by several herbicides (e.g. fluazifop and sethoxydim) in monocotyledons. The sequence is a 2-kb EcoRI fragment of phage lambda-gtll clone 15-14, isolated from a maize inbred Al88 seedling cDNA library by

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              A 2 kb EcoRI fragment (T39904) of lambda clone #15-14 includes a portion of a maize acetyl CoA carboxylase (ACCase) gene located at bases 2883 to 83 from the 3' stop codon. Clone #15-14 was isolated from a lambda gtll cDNA library of maize inbred A188 seedlings by screening with maize ACCase antiserum. Other ACCase DNA fragments (see also 79906-16) and a complete cDNA (T39905) coding ACCase isolated. ACCase DNA can be incorporated into a vector and used to increase the herbicide tolerance or oil
                                                                                                                                                                                                                                                                                                         Gaps
promoter, e.g. a cauliflower-mosaic virus 35S promoter or nopaline-synthase promoter, and N-terminal maize chloroplast transit peptide sequence in a plasmid vector for high-level tissue-specific gene expression, to confer herbicide resistance and/or alter the oil content of the plant, or to increase the plant Accase yield, so that the crystallized enzyme may be used to screen and identify other herbicides that bind to and inhibit the enzyme.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     DNA encoding maize acetyl coenzyme A carboxylase gene - used for prodn. of plants with herbicide tolerance or altered oil content
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present DNA sequence is a 2kb EcoRI fragment of lamda clone #15-14 including a portion of a maize acetyl CoA carboxylase (ACGSse) gene located at bases 2883 to 83 from the 3' stop codon. AcCase is involved in fatty acid synthesis and is the target of the specified herbicides. Transformation of plants with ACGSse imparts resistance to cyclohexanedione and aryloxyphenoxypropanoic acid herbicides and alter the oil content. The ACGSse DNA is also used as source of probes and primers for the identification of transgenic plants; in marker-assisted plant selection and for restriction fragment length polymorphism mapping, used for high-energy animal feed and high-fiber, low-fat human food and in genetic dissection of the groat oil trait.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New DNA encoding acetyl-CoA carboxylase from oats, used to produce transformed plants with herbicide resistance and altered oil content

This DNA, isolated from Mycobacterium leprae, encodes a precursor (immature) gyrase protein from which an "intein" (see W15074) is excised during maturation. The gyrase and its coding sequence are useful to fabricate products that alter the maturation of proteins essential for the development of infectious agents by altering the protein splicing of precursor polypeptides of the proteins. The inteins encoded by the gyrapersors products in Flavescens, M. gordonae and M. kansasii are used: (a) to modify the genome of a eukaryotic cell that lacks endogenous biological activity identical to that of the polypeptide; (b) to replace a copy of a gene present in a recipient genome by integration of a gene different from that where the integration takes place; and (c) for targetted insertion of a foreign DNA sequence into a selected site in the genome of a eukaryotic cell not containing the

The sequence is trans of the As accept board carboxylase (Access) CDNA maize clone which can be used to probe plant DNA to isolate other such clones. It may be used with plant regulatory sequences to produce expression cassettes for Accase. These cassettes are used to transform plants to downregulate prodn. Of Accase. This can alter the composition of seeds or other plant parts, e.g. enabling oil-bearing plants such as oliseed rape, sufflower or olipalm, having a lower or modified oil content to be produced. It can be used to form expression cassettes for overexpression of Accase. leading to prodn. Of plants with an increased oil content. It may also be used to recover the Accase gene promoter. This can be used to generate RNA in a tissue-specific or developmentally regulated manner, and this RNA used to inhibit Accase expression. Monocotyledonous plants can be made resistant to grass-weed herbicides such as fluazifop and alkylketones by transforming with cassettes adapted to express Accase. This is achieved by overexpression of monocot Accase, expression of dicot Accase (which is relatively tolerant to these herbicides used to destroy weeds growing between the plants. This allows the overall applien. Of herbicides used to destroy weeds growing between the plants. This allows the overall applien. Of herbicide without effecting the crop, and is also useful where there has been short term carryover of herbicide from the previous crop. Using the method, weeds such as wild oats may be controlled, and the farmer is given extra options to obtain an improved sitable crops are maize, wheat and harley. Chaaper or more effective.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The sequence is that of the A3 acetyl coA carboxylase (ACCase) cDNA
      Acetyl coA carboxylase: ACCase; probe; expression; oil content; lower; modified; increased; oilseed rape; sunflower; resistant; resistance; grass-weed herbicides; fluazifop; alkylketones; maize;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             DNA clones for use in probing plant DNA - comprise maize acetyl coenzyme-A carboxylase gene flanked by heterologous DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 4346 BP; 1239 A; 829 C; 1064 G; 1213 T; 1 other

Accase is involved in farty acid synthesis and is the target of the specified herbicides. Transformation of plants with Accase imparts resistance to cyclohexanedione and aryloxyphenoxypropanoic acid herbicides and alter the oil content. The Accase DNA is also used as source of probes and primers for the identification of transgenic plants; in marker assisted plant selection and for restriction fragment length polymorphism mapping, used for high-energy animal feed and high-fiber, low-fat human food and in genetic dissection of the groat
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present cDNA sequence encodes maize acetyl CoA carboxylase (ACCase)

This cDNA encodes a maize ACCase enzyme. This can be used in a method of preparing an herbicide resistant corn plant which comprises crossing a first corn plant to a second corn plant so as to yield a progeny plant, where the first corn plant comprises at least 1 herbicide resistant allele which is not allelic to the herbicide resistant allele present in the first plant. The herbicide resistant corn plants are prepared using Acc1 and Acc2 gene combinations which impart cylcohexanedione (CHD) or aryloxyphenoxypropanoic acid (APA) herbicide tolerance to the corn plant. The methods are used to impart CHD and APA herbicide tolerance to corn plants and to produce CHD or APA herbicide tolerant Zea mays (corn) homozygous or heterozygous for Acc1 and homozygous or heterozygous for Acc2 and homozygous or heterozygous for Acc2. The methods can also be used to impart tolerance to a corn plant to an agent which inhibits accetyl CoA carboxylase, selected from 20.2.4-dichlorophenyl) perhyddoindolizine-2.4-dione, 3 isopropyl-6-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö

Patent No. 5872216
GENERAL INFORMATION:
APPLICANT: Hannah, L. Curtis
APPLICANT: Giroux, Michael
TITLE OF INVENTION: Materials and Methods for Increasing
TITLE OF INVENTION: Corn Seed Weight
NUMBER OF SEQUENCES: 5
CORRESPONDENCE ADDRESS:
ADDRESSEE: Saliwanchik, Lloyd & Saliwanchik
STREET: 2421 N.W. 41st Street, Suite A-1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       MEDIUM TYPE: Floppy disk

                                                                                                                                                           /note="vector: psporr; Site_1: Not!; Site_2: Sall; cDNA library was derived from untreated inflorescence tissue from Arabidopsis thaliana, columbia col-0, at 4 - 7 weeks. Plants were grown in 1:1:1 pear of 4 - 7 moss/vermiculite/perlite soil at 22 deg. C +/- 3 deg. C under constant light, and watered with fertilizer. cDNA synthesis was initiated using a NotI-oligo(dT) primer. Bouble-stranded cDNA was blunted, ligated to Sall adaptors , digested with NotI, size-selected, and cloned into the NotI and Sall sites of the pSPORT vector."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          bs66h08.yl Drosophila melanogaster adult testis library Drosophila melanogaster cDNA clone bs66h08 5', mRNA sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            /clone_lib="Drosophila melanogaster adult testis library"

/describe="liature of cotyledons from five days old
plants and leaves obtained from two weeks old plants.
/lab_host="E. coll strain SOLR"
/lab_host="E. coll strain SOLR"
/note="Vector: pBluescript SK +/-: Site_1: EcoRI: Site_2:
XhoI: cDNA was prepared from polyA+ enriched RNA from the
mixture of cotyledons of five days old plants and leaves
of two weeks old plants. The cDNA was directionally
ligated into the Uni-ZAP XR vector from Stratagene and
packaged using Glapack III Gold packaging extracts.
Plasmids containing cDNA inserts were excised from the
recombinant lambda ZAP phage using Ex-Assist helper phage
and propagated in SOLR cells."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      /tissue_rype="leaves and cotyledons"
/dev_stage="mixture of cotyledons from five days old plants and leaves obtained from two weeks old plants"
/lab_host="E. col; strain SOLR"
/note="Vector: pBluescript SK +/-; Site_1: EcoRI; Site_2: xhoi; cDNA was prepared from polyA+ enriched RNA from the mixture of cotyledons of five days old plants and leaves of two weeks old plants. The cDNA was directionally ligated into the Uni-ZPA RX vector from Strangene and packaged using Glapack III Gold packaging extracts. Plasmids containing cDNA inserts were excised from the recombinant lambda-ZAP phage using Ex-Assist helper phage and propagated in SOLR cells."

/lab_host="XL-1 Blue MRF" (Stratagene); Site_1:
/note="vector: Lambda Uni-2AP R (Stratagene); Site_1:
ECORI, Site_2: Xho! mRNA was purified from 2 x 10E3
rhabditiform larvae which had been isolated from gerbils
experimentally infected duth larvae originally isolated
from experimentally infected dogs. cDNA was constructed
and, using adaptors, was cloned unidirectionally into the
vector from the ECORI site to the Xho! site. The library
has an unamplified titer of 1 x 10E5 pfu/ml and an
amplified, undiluted titer of 9 x 10E11 pfu/ml. The
average insert size of the unamplified library is 675 bp
(range, 100-1700)."
